GO-GLOBAL OVERVIEW

FAST AND SECURE ACCESS TO WINDOWS, UNIX, AND LINUX APPLICATIONS FROM ANYWHERE

■ ■ ■

GO-Global® from GraphOn® is the fast and secure application access solution that extends the reach of your existing Windows, UNIX, and Linux applications to your corporate network or the Web — without modifying a single line of code. GO-Global makes it easy to create a private cloud environment that lets your authorized employees, business partners, and customers securely access your applications from anywhere, regardless of connection, location, client platform, or OS.

Incorporating advanced server-centric technology, GO-Global is a an efficient cross-platform solution that cost-effectively Web enables your applications and documents for rapid delivery to local, remote, and mobile users running Windows, Linux, UNIX, Apple OS X and iOS, Android, or any Web browser. Your Web-enabled applications retain 100% of their features, functions and branding.

Access your Windows, UNIX and Linux applications and documents from virtually any platform, anywhere.

TODAY'S MOBILE NEEDS

Enterprises and independent software vendors (ISVs) have invested heavily in traditional Windows and UNIX applications. With the unprecedented growth and popularity of mobile devices and tablets, companies around the world are looking for new ways to leverage existing applications and extend their functionality to these popular platforms.

DOING MORE WITH LESS

IT departments today are being asked to do more with what they already have. Reduced budgets mean that many organizations cannot afford major re-engineering projects to meet expanding corporate goals. The critical questions being asked today include:

■ How do we lower our total cost of ownership (TCO)?
■ How do we capitalize on existing IT investments to meet new business requirements?
■ How do we quickly provide affordable, Web-enabled access without re-engineering our applications?

THE SOLUTION IS GO-GLOBAL

GO-Global meets all of these needs — and more. Web-enabled applications, private clouds, and cross-platform access provide your employees and other authorized users with easy, secure access to the critical applications and documents they need to do their jobs and improve your bottom line. With GO-Global enabled applications, your organization can quickly and cost-effectively reach new audiences and profit from new revenue opportunities. GO-Global significantly lowers your TCO by creating a private cloud within your secure data center that leverages your existing applications and network infrastructure.

Simplified Application Deployment

GO-Global greatly reduces the complexities of application deployment and management. It's the simple remote access solution with easy user administration. Application problems can be solved in a central location, not at the individual desktop locations. And GO-Global is much easier to deploy and use than alternative solutions such as Citrix XenApp or Microsoft Windows Remote Desktop Services (RDS).

GO-GLOBAL

Cross-Platform Application Access

GraphOn offers two product lines: GO-Global for Windows publishes Windows applications, while GO-Global for UNIX publishes UNIX and Linux applications. Both provide cross-platform access from just about any platform or operating system — even through a simple Web browser.
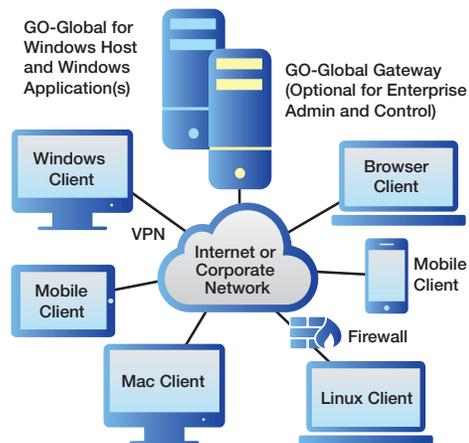

Unsurpassed Performance and Scalability

Unlike some other solutions, GO-Global for Windows publishes only the application's user interface, not the entire desktop, thereby increasing efficiency and performance. And GO-Global for Windows now includes our new GO-Global Gateway, allowing your administrators to monitor and manage clusters of GO-Global Hosts supporting thousands of users.

Retain Branding and Eliminate Retraining

GO-Global is transparent to your users. Web-enabled applications look and feel exactly the same as natively running applications. No special training is required. You can even private label GO-Global to promote your own branding, while retaining the rich look and feel that your users expect to see.

Designed with Your Security in Mind

GO-Global retains your mission-critical applications and sensitive files and documents securely behind your corporate firewall. Only the user interface is transmitted to client devices using our patented, fully encrypted RXP protocol.

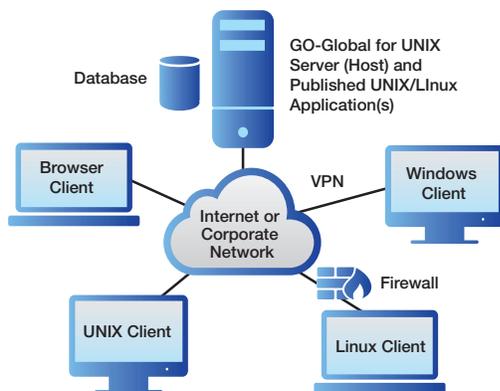

GO-Global for Windows provides fast and secure access to Windows applications, files, and documents.

GO-Global for UNIX provides fast and secure access to UNIX and Linux applications without the need for local X servers.

ABOUT GRAPHON

Founded in 1996, GraphOn Corp. is a publicly traded company (OTCBB: GOJO) headquartered in Campbell, California. For over a decade, GraphOn has been an innovator and developer of cost-effective, advanced technology solutions that help our customers access applications anywhere.

GO-Global has traditionally been targeted to small- to medium-sized businesses. Now, with the introduction of our new enterprise-ready, fully-scalable GO-Global Gateway, larger corporations and organizations are increasingly deploying GO-Global in large-scale, private cloud environments.

Today, industry-leading companies across the globe such as Agilent, Alcatel-Lucent, AT&T, Boeing, Compuware, Ericsson, FrontRange, GE, Mitsubishi, Ricoh, Siemens, U.S. DoD, Verizon, Yahoo, Xilinx, and countless others rely day-in and day-out on GO-Global for easy, efficient access to their applications — no matter where they may be.
